SKYGLIDE

components
catalogue

Skyglide – ceiling mounting.

Skyglide –

is the new system from Trietex for covering large roof areas. It is a very cost effective solution due to its time saving design. Beside the normal curtain track components only a few additional parts are necessary.

Key specifications:

- Suitable for even big systems with lengths of 7 m and widths of over 4 m.
- Extreme rigid rail.
- No sewing necessary.
- Very fast assemble.
- Rail opening can be placed to the center or the bottom.
- Motors can be placed up, down, inside or outside.

Skyglide – wall mounting.

Ordering Information:

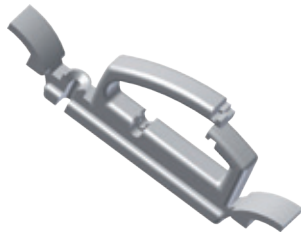

For Skyglide ceiling mounting you can use normal curtain track runners like heavy duty runner type 2-190-11-02 instead of SGL glider / holder. Please see our general catalogue for curtain track components for rail, motors, gears and other accessories.

Please note that single motors can only be connected with Skyglide ceiling mounting. Skyglide wall mounting always requires a minimum of two motors (Tandem System).

Additional Information:

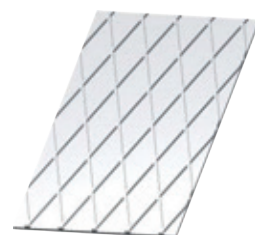

Article SGL Holder comes with two positions to fix. One to place the cross bar very close to the side rails and a second to place the cross bar with sufficient distance to make a 45% slope. The system is not designed for slopping more than 45%.

Technical Data are subject to change. Information regarding maximum dimensions and weights are only an estimation as a lot of factors are subject to variation. We recommend to use a safety margin of 20%.

Article No.	Description	Colour	Pack Unit
Parts for Skyglide ceiling and wall mounting.
